Consideration of Recommendations on Incumbent gTLDs

From Charter:

“...determine how incumbent registries should meet the new policy recommendations, if any.”

Scope and Assumptions:

- Existing gTLDs Only (Delegation pre-2012)
- Only second-level proposed protection recommendations apply
- Assumes that the present WG recommendation proposals are supported and adopted for new gTLDs

Principles of Implementation:

- Any policies adopted for new gTLDs shall apply equally to existing gTLDs to the extent they are relevant (for example second-level IGO-INGO protections utilizing TMCH, sunrise, claims will not apply).
- For clarification purposes, second-level names matching a protected identifier, as identified via any consensus policies defined here, and that are not registered within an existing gTLD, shall be immediately reserved from registration. Further, any proposed recommendation for reserving these names will require several months before any consensus policy is approved, implemented and could have an inherit risk for front-running. Thus, some names could be registered before the policy is in effect. A mechanism to guard against this should defined, such as the date these recommendations were adopted by the Working Group or GNSO Council.
- Where a second-level registration within an existing gTLD matches a protected identifier , as identified via any consensus policies defined here, and the registration of said name, if registered prior to implementation of reserved protections, shall be handled like any existing registered name within the incumbent gTLD (such as renewals, transfers, for sale, change of registrant, etc.).
- If a second-level name that matches a protected identifier, as identified via any consensus policies defined here, and becomes eligible for deletion after defined grace-periods, the name shall not be eligible for any drop/add activities by the Registrar as presently defined in the RAA.
- At the time the name becomes deleted, the name shall not be reallocated by the Registry and subsequently deemed ineligible for registration per the defined policy.
- Where policy changes to recover protected identifiers of registered second-level names within an existing gTLD deviate from current policy, indemnification should be considered.
- For clarification purposes, Second-level names matching a protected identifier that are also registered by a party other than the protected organization and bad faith use is suspected, the protected organization may have access to RPMs like the UDRP, pending a PDP to address policies in how the IGO-INGO organizations may access them.
