

SubPro WT 4: IDN / Technical / Operations

Meeting #8 1500 UTC 6 March 2017

#### Agenda

1-2

Welcome and Opening Remarks SOI updates 3

**Full WG Update** 

4

Name Collisions in legacy gTLDs

5

Name collisions in 2012-round gTLDs

6

Currently ongoing consensus calls and discussion themes

7

**AOB** 

# 1. Welcome and Opening Remarks 2. SOI updates

## Name collisions: new name, old phenomena (1 / 2)

- Situation 1: use of a previously unregistered domain
  - Example: acme-internal-network.com
- Situation 2: use of DNS suffix list
  - Example: acme.corp generating requests for acme.corp.com
- Work-Track discussion:
  - Contracted Parties should be forced or could be allowed to take collision domains away from users
  - Possible threats does not warrant policy changes

## Name collisions: new name, old phenomena (2 / 2)

- Situation 3: previously registered domain
  - Example: owner of acme.com let the domain expire, new user registers it
- Work-Track discussion:
  - Expired Domain Deletion and Expired
    Registration Recovery policies should be revised
  - Possible threats does not warrant policy changes

# 5. Name Collisions in 2012-round gTLDs

#### Name collisions Framework in 2012-round

- All 2012-round required to pass a controlled interruption period and be able to respond within two hours for life-threatening collision reports, for the first two years of delegation
- Current number of collision reports is xxx occurrances reported to ICANN, of which 0 were life-threatening
- Work-Track discussion:
  - 2012-round registries should extend such support beyond the 2-year period
  - Occurrence experience does not warrant creation of policy to override what is in the agreements

# 6. Currently ongoing consensus calls and discussion themes

#### Consensus Call WT4-1: Demonstrating technical capability only after evaluation

#### **Recommendation 7:**

"Applicants must be able to demonstrate their technical capability to run a registry operation for the purpose that the applicant sets out. "

Possible Language: "Applicants must be able demonstrate their technical capability to run a registry operation for the purpose that the applicant sets out, but will only be required to do so at contract-signing time, after passing other criteria and/or approvals and prevailing in contention set(s)."

#### Technical Evaluation to be performed as aggregated / consolidated as feasible

- No clear indication of why Staff decided against consolidating technical evaluation in 2012-round
  - a. Any ideas ?
- Consolidation is not fully tied with back-end certification, could apply to applications from the same applicant, but can be an enabler
- Possible Language:

"Technical Evaluation may be aggregated and/or consolidated to the maximum extent possible that generate process efficiencies, including both different applications from the same applicant and different applications sharing a common technical infrastructure"

## "Financial Evaluation must be performed in aggregation of a registry family"

- AGB clearly overlooked different business models in 2012-round
  - a. Revenue-generating or self-sustainable registry (profit or non-profit)
  - b. Cost-center registry (typical of brands, possibly causes)
- Besides different financial goals, single-application evaluation overlooked the possibility of an applicant winning so many TLDs to the point of not being able to run them (gaming the system)
- Rec. 8: "Applicants must be able to demonstrate their financial and organisational operational capability."
- Possible Language: "Applicants must be able to demonstrate their financial and organisational operational capability in tandem for all currently-owned and applied-for TLDs that would be part of a single registry family."
- Financial Evaluation would still be gating and be done prior to contention set resolution

#### IDNs: Discussion Outcome on 1-char IDN TLDs

- Discussed in WT4 since Hyderabad
- Proper definitions provided by ICANN staff on different type of characters:
  - a. Letter (examples: Latin and Cyrillic)
  - b. Syllable (examples: Japanese Katakana and Hiragana, Mayan)
  - c. Ideograph (or ideogram) (examples: Japanese Kanji, Traditional Chinese)
- Possible Language:

"IDN 1-char gTLDs won't be disallowed for script/language combinations where a character is an ideograph (or ideogram), provided they are not country and/or territory names."

Operational hazard: language is not defined in a char, only the script.

Coordination with ccNSO and GAC consultations were found appropriate.

#### IDNs: Discussion Outcome on Variant TLDs

- Also discussed in WT4 since Hyderabad
- Previously seen as conflicting with Rec. 2:
  - "Strings must not be confusingly similar to an existing top-level domain."
- 3 possible solutions identified
- Possible Language:

"IDN gTLDs deemed to be variants of already existing or applied for TLDs won't be disallowed provided: (1) they have the same registry operator implementing, by force of agreement, a policy of (....) (2) top-level LGRs and second-level LGRs already established for the script/language at evaluation time."

#### IDNs: Connection with security and stability review

- Security and stability review role was not clearly defined in AGB
- Later in the process, there were mentions that they only applied to IDN rendering
- SSR hasn't evaluated risks such as name collisions, which was addressed much later
- No IDN LGRs available at that time
- Can the IDN part of SSR be done completely by algorithms in the submission system?
- What other security and stability considerations were evaluated? Perhaps asking ICANN for the SOW?
