	registrations and	Forum's site: There are 698 URS	this may require further analysis to find non-TMCH	
What is the effect of	providing notice to	cases and 15 of them contain the	marks to compare fairly)	
the 90-day	domain name	term "SMD."		
Trademark Claims	applicants <sup>2</sup> ?		1b: Anecdotal data from registrants or domain	
process?	b. Is the Trademark	(MG): Ask URS filers if their/their	name applicants who received claims notices.	
processi	Claims service having	client's mark was in the TMCH.	More granular data about the percentage of those	
	any unintended		who abandoned attempts in response to a notice	
Should the	consequences, such as	1b:	based on dictionary terms versus those who	
Trademark Claims	deterring good-faith	(KD): Of those who abandoned:	abandoned attempts in response to distinctive	
period be extended	domain name	How many thought about it and	trademarks.	Comment [MG(2]: Use of the original "terms"
beyond ninety (90)	applications?	went back later (that is, it made		confusing. I don't think my proposed change necessarily much better, but worth considering
days?		them think but they made an	Others:	Comment [MG(1]: I wonder if we need this or
		educated decision)?		should leave the question open? If we keep,

<sup>&</sup>lt;sup>1</sup> The Sub Team agrees that, as used in this list of Charter questions, the phrase "Trademark Claims" covers both the pre-registration Claims Notice that is sent to a prospective registrant who is attempting to register a domain name that matches a trademark label in the TMCH, and the post-registration Notice of Registered Name that is sent to the relevant rights-holder when the registrant proceeds to complete the registration.

1

<sup>&</sup>lt;sup>2</sup> The use of the term "domain name applicant" is not meant to ascribe any intent on the part of the applicant, as intent cannot be confirmed.

	Consumer survey evidence, perhaps via Amazon Turk or online survey group, using existing notice and perhaps other alternatives to test comprehension of the Notice among individuals likely to consider registering a domain name Data available in the Analysis Group revised report pertinent to 1a/1b: • 125.8 million records of Claims Service downloads between October 4, 2013 and February 24, 2016 • Unique download <sup>3</sup> requests (after excluding duplicative records): 113.2 million • Number of unique verified trademarks in the TMCH downloaded during the Claims Service period (at least once): 26,405 out of a total of 33,523 current and verified records in the TMCH • About 17,500 disputes (UDRP/URS) between January 2014 – December 2015 • 12.9% of disputes matched Claims Service notification (dispute rate of domains that trigger Claims Notice) • Abandonment rate (all downloads of trademarks from IBM that are not associated with a domain name
--	--

<sup>&</sup>lt;sup>3</sup> Unique downloads are defined as the unique combination of trademark string, downloading registrar ID, and download time stamp (NOTE FROM MG: 1 think we should ask AG to change both the definition and the resulting figures. 1 think "unique downloads" should be defined not as comprising all three qualities but must be the unique trademark string and either the registrar ID or the download time stamp. Otherwise, the same registrar could download at two different times the same string and still be considered unique.)

	registration): 94% <sup>4</sup> <ul> <li>Percentage of new gTLD domain name registrations that resulted in Claims Notice generation and subsequent disputes: 0.3%</li> </ul>
	<ul> <li>NOTE: The specific rates of Claims Service registration abandonment, completion and disputes (October 2013 - February 2016) and reported by the Analysis Group were as follows: <ul> <li>1,696,862 out of 1,810,546 attempted registrations generated Claims Notices and were abandoned (93.7%)</li> <li>113,338 out of 1,810,546 attempted registrations generated Claims Notices, were not abandoned, and were not subsequently disputed (6.3%)</li> <li>346 out of 1,810,546 attempted registrations generated Claims Notices, were not abandoned, and were subsequently disputed (0.0%)</li> <li>The registrations in the Claims Service data account for approximately 5% of 2.2 million registrations made in new gTLDs during Claims Service periods that occurred between October 2013 and February 2016 (i.e., the time period covered by the Claims Service data)</li> </ul> </li> </ul>

<sup>4</sup> Due to limitations of the data, the Analysis Group analyses of the data required an assumption that each download is associated with a registration attempt (and was not downloaded by a registrar for a purpose unrelated to domain name registrations). If this assumption is incorrect, then their results will exaggerate the size of any observable registration-deterrent Claims Service effect.

<ul> <li>Discussion on data (from registrars) concerning the abandonment rate:</li> <li>What is the abandonment rate associated with reasons other than a Claims notice being triggered? what is the difference between abandonment rates of applications that trigger Claims Notices, and those that don't?</li> <li>Analysis Group did reach out to registrars and registries, but was not able to acquire data on an abandonment rate of domain name registrations that did not trigger a Claims Notice</li> <li>Registrars may not be agreeable to providing data on abandonment rate not associated with a Claims Notice - may involve competitive issues</li> <li>A high-level set of data concerning abandonment rate of domain name registrations that did not trigger a Claims Notice might be obtainable from registrars, but need to first determine to what extent this would be helpful in providing/influencing direction to the PDP WG</li> <li>Would registrars be willing and able to share anecdotal data on why potential registrations did not complete registrations</li> </ul>	
<ul> <li>abandorment rate:</li> <li>What is the abandonment rate associated with reasons other than a Claims notice being triggered? what is the difference between abandonment rates of applications that trigger Claims Notices, and those that don't?</li> <li>Analysis Group did reach out to registrars and registries, but was not able to acquire data on an abandonment rate of domain name registrations that did not trigger a Claims Notice</li> <li>Registrars may not be agreeable to providing data on abandonment rate not associated with a Claims Notice - may involve competitive issues</li> <li>A high-level set of data concerning abandonment rate of domain name registrations that did not trigger a Claims Notice may involve competitive issues</li> <li>A high-level set of data concerning abandonment rate of this would be helpful in providing/influencing direction to the PDP WG</li> <li>Would registrars be willing and able to share anecdotal data on why potential</li> </ul>

registrants did not complete registrations –	share anecdotal data on why potential
	registrants did not complete registrations –

		<ul> <li>PDP Charter questions - this data can be anonymized</li> <li>Not all registrars keep records of when and why abandonment takes place – might be more achievable to keep records on this in future rounds, than rely on past data</li> <li>Can the Analysis Group provide anonymized data (percentages, not raw numbers) on specific registrars that downloaded trademark records, without providing registration services during the Claims Period?</li> </ul>
	Su	<ul> <li>uggested questions for registrars:</li> <li>What is the abandonment rate associated with reasons other than only a Claims notice being triggered? what is the difference between abandonment rates between those that trigger Claims Notices, and those that don't?</li> <li>Is there anecdotal data explaining why potential registrants did not complete registrations?</li> <li>At what point in the registration process is a trademark record downloaded? Does this happen when domain names are placed in carts, or does it happen when payment/attempted registrations are done later in the process?</li> </ul>

				<ul> <li>Many registrars take orders for domain names before general availability – pre- orders do not normally result in Claims notices being presented until within 48 hours of general availability – does this contribute to the abandonment rate? If so, to what extent are pre-ordered domain name registrations abandoned?</li> <li>Would it be feasible for registrars to run surveys of domain name applicants during subsequent rounds of new gTLDs for anecdotal evidence on why registrations are being abandoned? Is this something ICANN should mandate?</li> </ul>	
2.	Should the Trademark Claims period continue to apply to all new gTLDs?	<ul> <li>2. If the answers to 1.a. is "no" or 1.b. is "yes", or if it could be better: What about the Trademark Claims service should be adjusted, added or eliminated in order for it to have its intended effect?</li> <li>a. Should the Claims period be extended - if so, how long (up to permanently)?</li> <li>b. Should the Claims period be shortened?</li> <li>c. Should the Claims period be mandatory?</li> </ul>	Ideal research (because data doesn't yet exist in aggregated from): List of new gTLD domains subject to URS (and UDRP?) between 2013-present and note their registration date as compared to the end of claims period.	<ul> <li>2 (generally):</li> <li>2a: Is there a spike in registrations that are ultimately subject to the URS after the Claims period ends?</li> <li>Data available in the Analysis Group revised report pertinent to 2a/2b: <ul> <li>Dispute rate for exact-match strings registered during Claims Service period/Number of exact-match registrations in the same period (October 2013 - February 2016): 323/136,732 (0.24%)</li> </ul> </li> </ul>	Comment [MW7]: FROM KD: why limit to URS, which is used rarely? Is it because there is too much UDRP data? Comment [8]: I think this is misleading because URS/UDRP cases are often not filed until there is a use made of the domain name, which can be some time after it's registered. Comment [MW9R8]: NOTE FROM STAFF: This was pointed out by AG as a potential limitation in their study, i.e. that disputes may have been filed after February 2016.

	d. Should any TLDs be exempt from the Claims RPM and if so, which ones and why?	<ul> <li>Dispute rate for exact-match strings registered within 90 days after the Claims Service period/Number of exact-match registrations in the same period (October 2013 - February 2016): 62/47,606 (0.13%)</li> <li>Exact-match registrations during and after Claims Service period by non-trademark holders/Month from the beginning of the Claims Service period (estimated numbers - please refer to Figure 1 on page 20 of the AG revised report):         <ul> <li>→ Beginning of Claims Service Period Month 0: 59,000</li> <li>Month 1: 35,000</li> <li>Month 2: 19,000</li> <li>→ End of Claims Service Period</li> <li>Month 3: 17,000</li> <li>Month 4: 14,000</li> <li>Month 5: 14,000</li> <li>Month 7: 10,000</li> <li>Month 7: 10,000</li> <li>Month 1: 11,000</li> <li>TMCH users enrolled in ongoing notifications service/not enrolled:                  a.
