Note: Tamang uses the “nukta” character represented by U+093C and hence the characters represented by U+0958, U+0959, U+095A, U+095B, U+095C, U+095D, U+095E, U+095F. Similarly, it uses the “anudatta” character represented by U+0952. However, since these characters are not allowed as part of the Devanagari MSR, these have not been included in the code chart for Tamang in the table above. There are not any notable cases of variants in

Tamang as opposed to Nepali. Although, technically there exists two forms of Tamang language, respectively, Eastern and Western Tamang, as per the conversation with Tamang experts, the differences are quite nominal pertaining to some stylistic differences in the use of some characters. Hence, the given MSR is considered to be applicable for the Tamang language in general.
