Update on RSSAC028

Prepared by Paul Hoffman

RSSAC Caucus meeting, IETF 100
12 November 2017

ICANN

Summary of Document Status

- ***Technical Analysis of the Naming Scheme Used for Individual Root Servers***

- Published 3 August 2017

- Lots of announcements were made, but no significant reaction seen

- Contains many recommendations

- Waiting for more activity from RSSAC Caucus

Summary of Recommendations

◉ Primary recommendation: No changes should be made to the current naming scheme used in the root server system until more studies have been conducted

◉ Additional recommendations for further studies
  ○ How would resolvers react to each proposal?
  ○ Feasibility and impact of node re-delegation attacks
  ○ Reducing the priming size

◉ Some speculative recommendations if node re-delegation attacks are feasible
