Open Questions

What are the target user groups?

1. RSOs wanting to determine where to place anycast instances.
2. Recursive resolver operators wanting to better understand the RSS.
3. Researchers wanting a better understanding of the RSS.
4. Governments wanting to improve on access.
5. End-user trying to check if connectivity can be improved (end-user experiment)

What are the possible Scenarios

1. Users changing locations
2. Differences between access to root server and other known entity.
3. Routing issues?

What are some common user narratives we can draft for each of these groups?

1. What is a need, or a problem, that this tool could solve for each of the above user groups?
   a. Is the problem known to the user group that has it?
2. Why would they use this tool as opposed to an already existing tool?
3. How would they learn about the existence of this tool?
4. How would this tool fit into their regular work flow?
