|           |  |  | (kc has clarification from ICANN Org on exactly what is<br>underway and how they are measuring its effectiveness.)   |  |                          |   |  |  |  |
|           |  |  | Clearly ICANN has not met its own objectives of "develop   |  |                          |   |  |  |  |
|           |  |  | [ing] a robust, reliable, reproducible, and replicable<br>methodology for analyzing security threat activity that can<br>then be later used by the ICANN community to facilitate |  |                          |   |  |  |  |
|           |  |  | then be later used by the ICANN community to facilitate  |  |                          |   |  |  |  |
|           |  |  | informed policy decisions." DAAR falls far short of this<br>goal in practice and lacks sufficient  |  |                          |   |  |  |  |
|           | Improve the Completeness and Utility of<br>the Domain Abuse Activity Reporting       | Work is already underway by ICANN org towards implementation of this recommendation. If  | information to be able to tel, for example, which registrars<br>or registries are harboring significant abuse, which kinds,  |  |                          |   |  |  |  |
| ICANN Org | 13 Program   | the SSR2 RT's intent is to recommend implementation of something beyond what is in<br>progress with ongoing work, ICANN org encourages the SSR2 RT to provide specific details.  | etc.   | TBD  | Clarify (kc input needed | ) Clarified   |  |  |  |
|           |  | The IPC is supportive of this recommendation, and discusses its support for this   |  |  |                          |   |  |  |  |
|           |  | recommendation in greater detail below.<br>The IPC strongly supports the RT's recommendations that address investigating and<br>responding to DNS  |  |  |                          |   |  |  |  |
|           |  | responding to DNS<br>abuse, including Recommendation 12: "Create Legal and Appropriate Access Mechanisms to  |  |  |                          |   |  |  |  |
|           |  | WHOIS  |  |  |                          |   |  |  |  |
|           |  | Data," SSR2 Recommendation 13: "Improve the Completeness and Utility of the Domain<br>Abuse Activity   |  |  |                          |   |  |  |  |
|           |  | Reporting Program (DAAR)," SSR2 Recommendation 17: "Establish a Central Abuse Report<br>Portal," and   |  |  |                          |   |  |  |  |
|           |  | SSR2 Recommendation 19: "Update Handling of Abusive Naming."   |  |  |                          |   |  |  |  |
|           |  | <br>As for the DAAR, the IPC commends ICANN's intended goal of "develop[ing] a   |  |  |                          |   |  |  |  |
|           |  | robust, reliable, reproducible, and replicable methodology for analyzing security threat activity that can   |  |  |                          |   |  |  |  |
|           |  | then be later used by the ICANN community to facilitate informed policy decisions." However,   |  |  |                          |   |  |  |  |
|           |  | the PT's   |  |  |                          |   |  |  |  |
|           |  | assessment finds that the DAAR falls far short of this goal in practice because it lacks sufficient<br>information to be able to tell which registrars or registries are harboring significant abuse. The  |  |  |                          |   |  |  |  |
|           |  | IPC<br>supports the RT's recommendation to include this critical data and turn the DAAR into a   |  |  |                          |   |  |  |  |
|           |  | powerful tool for<br>accountability and transparency in the domain name registration system.   |  |  |                          |   |  |  |  |
|           |  | The IPC does however note that a number of brand owners now operate Brand TLDs under   |  |  |                          |   |  |  |  |
|           |  | Specification  |  |  |                          |   |  |  |  |
|           |  | Specification<br>13, in which, due to the nature of these TLDs, the risk of DNS abuse is low. In making<br>recommendations   |  | recommend avoid imposing<br>unnecessary and costly burdens on                    |                          |   |  |  |  |
|           |  | that seek to impose additional obligations for monitoring and reporting, the IPC would urge the RT to  |  | Brand TLDs. In   |                          |   |  |  |  |
|           |  | acknowledge differing risk profiles and avoid imposing unnecessary and costly burdens on   |  | particular, this might include different<br>requirements for access to Brand TLE | )                        |   |  |  |  |
|           |  | Brand TLDs. In<br>particular, this might include different requirements for access to Brand TLD zone files through   |  | zone files through the CZDS,<br>different security threat monitoring             |                          |   |  |  |  |
|           |  | the CZDS,  |  | and reporting requirements, and  |                          |   |  |  |  |
|           |  | different security threat monitoring and reporting requirements, and different audit approaches<br>with  |  | different audit approaches with<br>respect to maintaining the security of        |                          |   |  |  |  |
