

Board Question #8

suggested criteria for determining whether a Collision String should not be delegated, and suggested criteria for determining how remove an undelegated string from the list of Collision Strings

Draft Answer (workspace below)

Workspace: for data and documentation

Applicable notes from Study 1

- * questions that should be asked to consider
 - * is there data that is needed? what is it?
 - * what is the gaming risk?
 - * frequency of re-evaluation of collision string list?
 - * closely related to question (7); together they are "threshold questions"
- Proposed Gap:** * closely related to item (7) and should be considered with it

Questions from [Study 2 Proposal, Appendix 3](#)

Related to question 7 (and we have information in the notes on question 7 that touches on this).

As we develop our criteria for what should be a collision string, and what mitigation could look like, it will then be more obvious as to if/when it can come off the collision string list.

Alternatively, the collision string list might be a place to put names that have to be monitored on an ongoing basis.
